Media Alert

For Immediate Release

H1N1 Vaccine depleted; call your health department to find out if its hours will be extended tonight or not.

The limited supply of H1N1 vaccine available in Southwest Health District's 14 county health departments is nearly depleted. Those health departments with any H1N1 vaccine – either the injectable form or the nasal mist – will remain open until 7:30 p.m. tonight to continue administering vaccinations to those in the priority groups most at risk of complications from H1N1.

H1N1 vaccine shipments are trickling in and are expected to remain in short supply. Please call your local health department first to find out if doses are available so you don't make a needless trip.
